# HOW TO OBTAIN A REPORT ON RESUME DATA USING AN "OR" STATEMENT IN YOUR CONDITIONS

If you are trying to pull a report that shows all employees with **either** a Steno value greater than 0 **OR** Typing Speed value greater than 0, you would normally build your condition as shown below. However, in this case, you will receive an error message when running the query below.
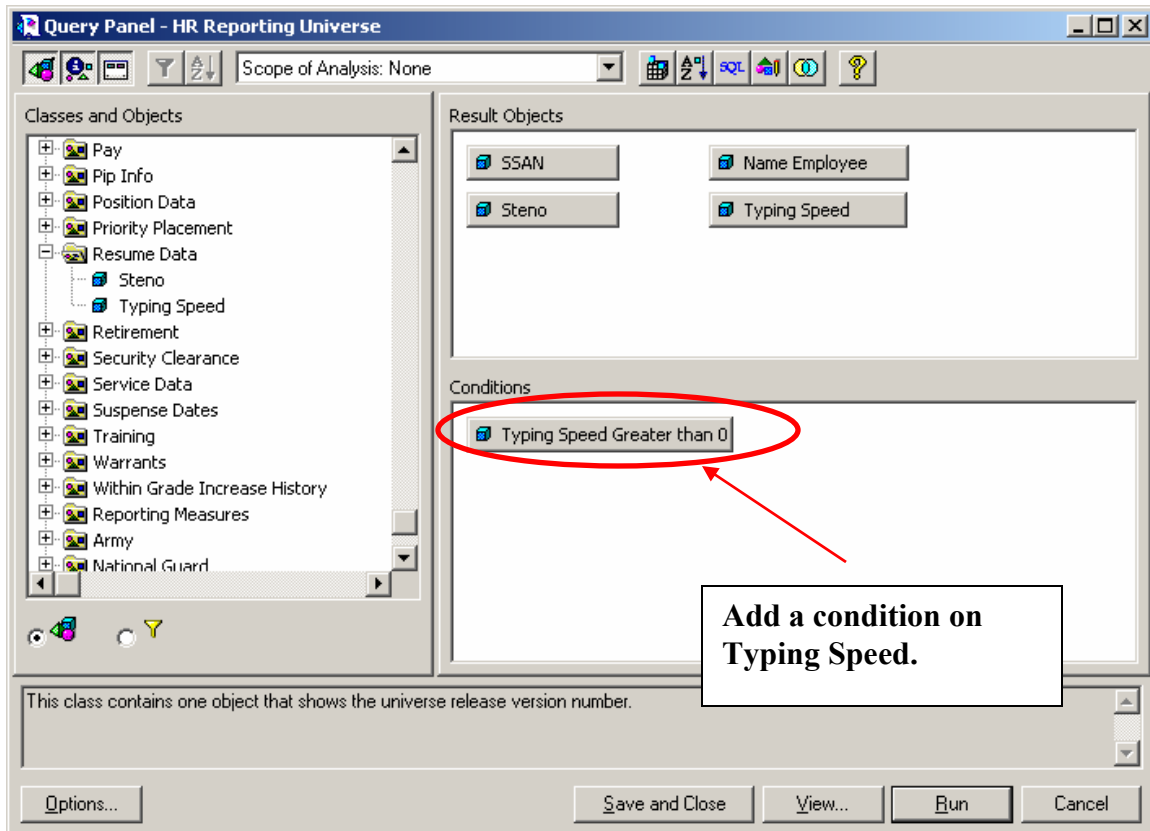

Query Panel:

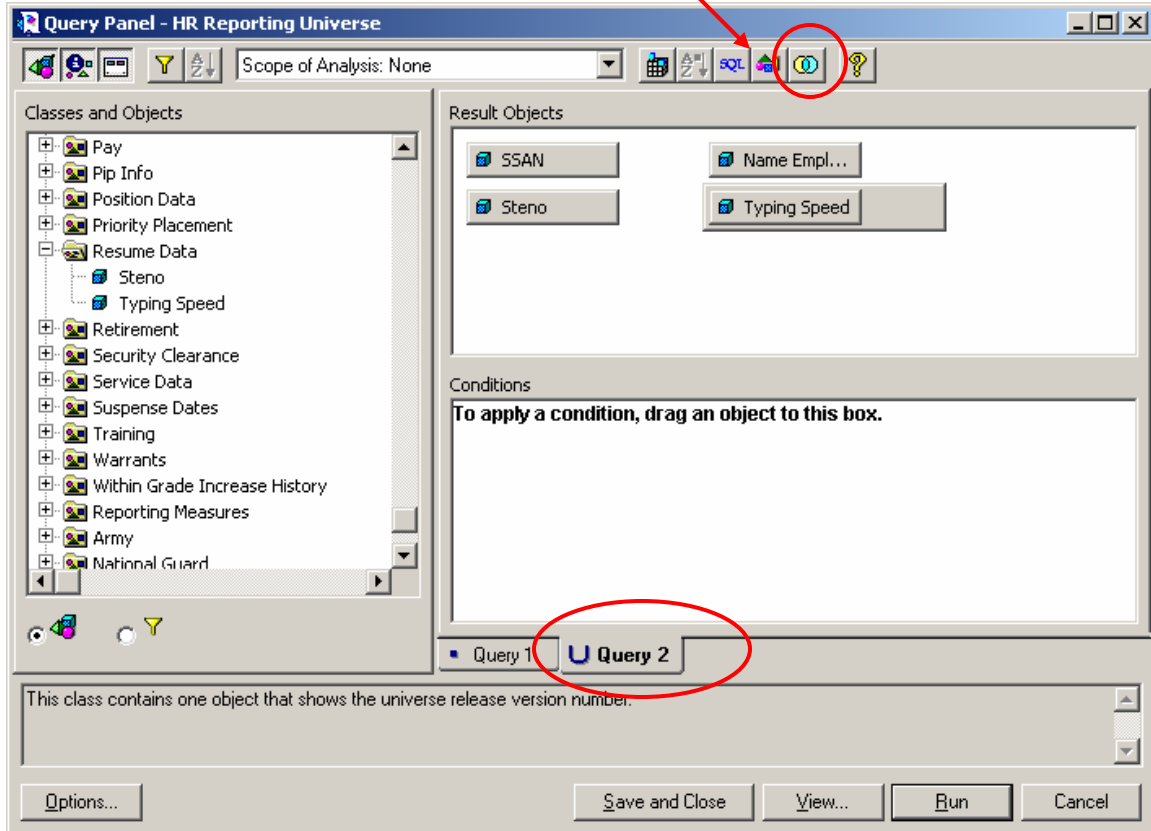

Error Message after clicking on Run:

Workaround: Creating a Union Query

Here is the workaround to obtain resume data for Typing Speed Greater Than 0 **Or** Steno Greater Than 0.
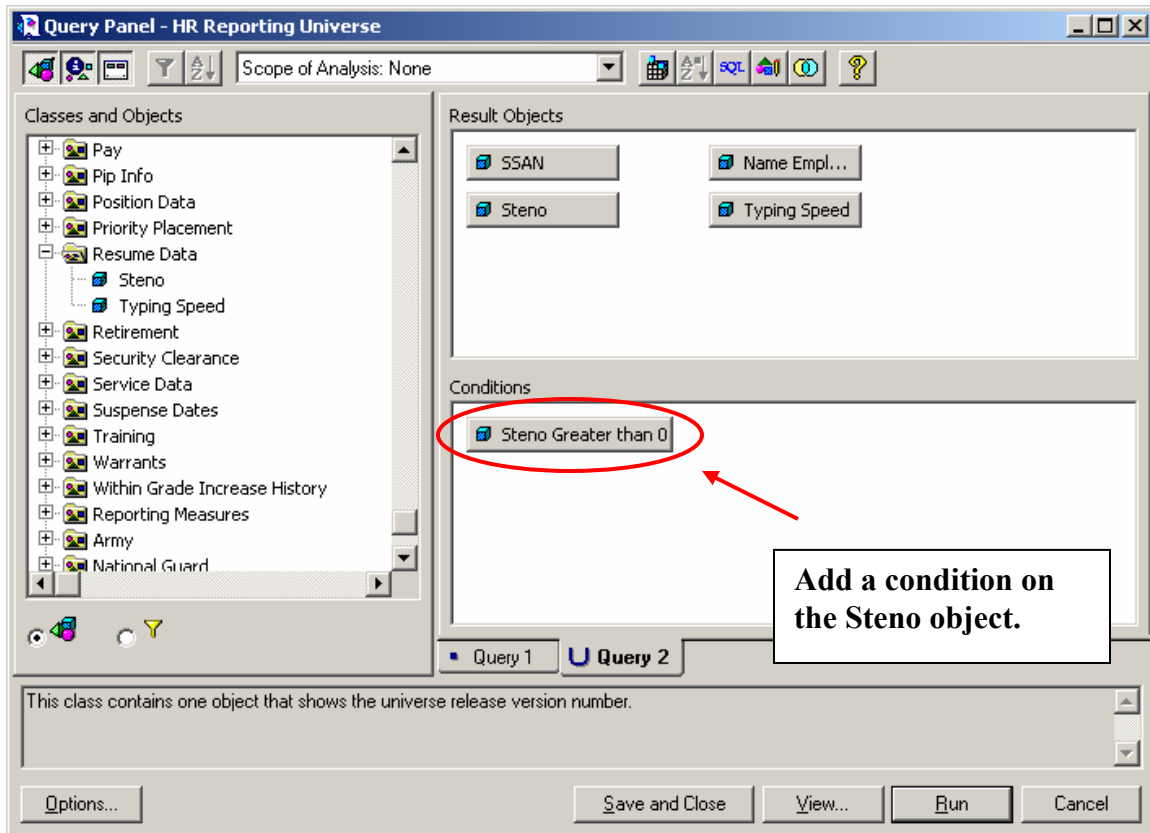

First, pull over the desired objects into your Result Objects panel that you would like to display in your report. In your conditions box, add a condition for Typing Speed. In this case, you will create a condition that reads 'Typing Speed Greater Than 0'

Add a condition on Typing Speed.

Next, click on the Combine Queries Icon and this brings up Union Query 2 tab.

Add your second condition on the Steno object. In this case, add the condition 'Steno Greater than 0'.

Click on Run when you are finished. The report will run without any errors and will provide you with a list of employees who either have a Steno value or a Typing Speed value.
